APPLICATION DATA

The Sylvania Type 5836 is a broadband reflex klystron designed for cw or pulsed operation in conjunction with external cavity resonators. This tube operates over the range from 1600 to 6500 Mc in three modes. The 5836 is particularly adapted for use in signal generators, spectrum analyzers, or local oscillator applications where broadband frequency coverage is needed.

APPLICATION DATA

Recess in Contact Plunger	1/2"	Loop Size for 3000-5000 mc	9/32"
Loop Size for 800-3500 mc	9/16"	Loop Width for Both Ranges175"

The length is determined by the frequency of operation and the range of plunger motion is set by the frequency band to be covered.
